

Gui.bootstrap1 with parameters sqrt=F on left and sqrt=T on right

Gui.bootstrap2 on left and Gui.bootstrapxy on right. Parameters Prediction Bound=F, CI=0.9

Gui.bootstrapxy is a rougher model because it tries to fit a 'true' 90% of the data from its samples. It uses my.dat.plot5a which takes two matrixes as parameters, the original one, and the sample one.
